

Website & Online Growth

Project progress report

This report explains the work completed for Evercrest Roofing in simple language. It covers the website, navigation, Google Business Profile review, SEO setup, Google Search Console, Analytics and the bonus flyer.

COMPLETED AND CHECKED

- Website pages and service/area pages are in place.
- Navigation dropdowns work on desktop and mobile.
- Menu links from service and area pages return visitors to the correct homepage sections.
- The website build completed successfully after the updates.

WAITING FOR APPROVAL OR CLIENT ACTION

- The latest mobile header/logo spacing fix is ready but has not been pushed yet.
- Google Business Profile verification and final business details need the owner to complete or confirm them.
- Google Search Console indexing requests still need to be submitted or monitored.

1. Website work

The website was prepared as a professional online presence for Evercrest Roofing, with clear information for customers looking for roofing help in Dublin and surrounding areas.

- Created and organised the homepage with roofing services, contact buttons and free-quote calls to action.
- Added service pages for roof repairs, emergency roof repairs, flat roofing, gutter cleaning, gutter repairs and chimney repairs.
- Added location pages for Dublin City, South Dublin, North Dublin and Fingal.
- Added real project/gallery content and service imagery to make the business look trustworthy.
- Reviewed the mobile layout and improved the position and size of the Evercrest Roofing logo.
- Prepared a final mobile header fix so the logo stays centred and does not clash with the menu button.

2. Navigation improvements

The main menu now makes it easier for customers to find the right service or local area page.

- Added a Services dropdown with the main roofing services.
- Added an Areas We Cover dropdown with the four Dublin area pages.
- Added tap-to-open dropdowns for mobile visitors.
- Fixed links on inner pages so About Us, Services, Areas, FAQ and Contact return to the correct homepage section.

3. SEO and Google setup

The technical SEO foundation was reviewed so Google can understand and crawl the website. SEO results take time and rankings cannot be guaranteed immediately.

- Confirmed that the area pages are included in the XML sitemap.
- Confirmed that the robots file allows search engines to crawl the website.
- Reviewed the page titles and descriptions for the homepage, service pages and location pages.
- Reviewed the Google Business Profile description, category, phone number, website, service areas and opening hours.
- Explained that Google may request additional Business Profile verification after edits.
- Explained that accurate information, genuine reviews, regular activity and time are needed for organic growth.

4. Search Console issue checked

Search Console first showed a 403 access error. This meant Googlebot was temporarily blocked from the website. A later live test showed the website returning 200 OK, with crawling and indexing allowed.

- The live website is now available to Google for crawling.
- The sitemap includes the four area pages.
- The next step is to submit or resubmit the sitemap and request indexing for important pages.

5. Google Analytics

Google Analytics 4 was set up using Measurement ID **G-R1LQPR146G**. The tracking tag was added to the shared website head so it can collect visitor data across the website after deployment.

The client can check Google Analytics Realtime after deployment to confirm visits are being received.

6. Bonus marketing material

A professional Evercrest Roofing flyer was prepared as a bonus. It was not part of the original monthly offer.

- The flyer can be printed and used as an offline leaflet.
- It can also be shared online through WhatsApp, Facebook and other social media.
- The supplied QR code sends people to the website so they can learn more or request a quote.
- The flyer includes the main services, phone number, website and free-quote message.

7. Next steps

- Approve and push the final mobile header/logo fix.
- Complete Google Business Profile verification from the business owner's account if requested.
- Confirm the correct service areas and real customer-facing opening hours.
- Submit the sitemap in Google Search Console and request indexing for the area pages.
- Check Google Analytics Realtime after deployment.
- Continue collecting genuine customer reviews and adding real completed-work photos.
- Continue monthly SEO work and monitor search visibility, website visits and enquiries.

Important: Organic SEO depends on Google, competition, website activity, reviews and time. The work improves the foundation and visibility, but no search ranking or number of leads can be guaranteed.
